

GO Live

Features:

- ◆ Optional Driver ID keys capture individual driver activity and can be used for time clock verification
- ◆ Up to 10,000 miles of storage capacity
- ◆ Monitor how much time is spent with each client
- ◆ Activity, Productivity, Customer, Maintenance, and Risk Management Reports
- ◆ Data is easily exported into Microsoft Excel
- ◆ Reports engine idling for fuel and maintenance management
- ◆ Minimize monthly expenses by customizing the way data is packaged and sent
- ◆ In-Vehicle alerts to increase safer driving
- ◆ Exception Reports with IFTA state mileage summary

Benefits:

- ◆ Reduce gasoline expenses
- ◆ Track worker productivity and timecard accuracy
- ◆ Excel reports can be used to increase driver efficiency

Results:

- ◆ Promotes safer driving
- ◆ Reduces accidents and unsafe driving
- ◆ Helps solve problems with vehicle productivity and utilization
- ◆ Reduces the occurrences of vehicle abuse.

GO Live is an effective real-time vehicle tracking system that provides high quality data as quickly as every 30 seconds. This module is for companies that need to know where their assets are at all times while out in the field. The GO Live system is equipped with a GPRS external modem that compatibly runs on the Cingular Wireless GPRS/Edge Network in the United States and the Rogers Wireless Network in Canada. GO Live provides the highest quality data, with the most detail for a low monthly cost.

Standard Communications:

The tracking system uses the Cingular Wireless or Rogers Wireless GPRS network to transfer data from the vehicles to your office. Encryption is used to ensure the security of the network and the data being transferred, preventing any unauthorized access. The data is downloaded wirelessly to the office computer directly through an internet connection.

Data Available:

The software allows fleet managers to track speed, idle time, time spent with customers, location, stop time, duration, and exceptions all in real-time.

Reduction of Fuel Costs:

With the cost of fuel constantly on the rise, GO LIVE can help minimize the cost by monitoring the amount of miles driven, and improve driving habits. The system can alert drivers when they are going a certain amount over the speed limit, thus reducing gas consumption.

Increases Productivity:

GO LIVE allows fleet managers to calculate how much time is being spent with each client, as well as track the routes of the trucks ensuring that they were within their boundaries. Many companies are having trouble with non-work related activity and this tracking system can limit those unauthorized activities.

Low Monthly Payment:

Many fleets find less than 1MB/vehicle/month of compressed packet data is all that is necessary to send over the cellular network. Managers only pay monthly for the data that is needed to be sent throughout the day. Managers can easily customize the way they package and send data to minimize their monthly payment.
