♦ Activity, Productivity, Customer, Maintenance, and Risk Management Reports

♦ Data is easily exported into Microsoft Excel

Benefits:

♦ Reduce repair costs

♦ Reduce insurance costs

♦ Significantly reduce gasoline expenses

♦ Track worker productivity and timecard accuracy

♦ Reduce accident frequency

GO Mobile provides live real-time vehicle tracking combined with text messaging capabilities. GO Mobile gives you the ability to dispatch field status updates and routing directions to operators in the field. It is a great product for those who are on the go and are away from their vehicles often, needing up to the minute updates. GO Mobile provides the flexibility to track vehicles on the move when out in the field or away from a computer.

Full Featured:
GO Mobile provides a GPS device that allows the user to talk, email, manage contacts, upload maps of locations in the field, and dispatch directions all on one device. The device will still record GPS data even during voice calls, emails, or while using other applications.

Standard Communications:
The GO Mobile tracking system uses the Cingular Wireless Network or the Rogers Wireless GPRS network to transfer data from the vehicles to the software. An encryption method is used to ensure the security of the network and the data being transferred, preventing any unauthorized access. The data is downloaded wirelessly to the office computer directly through an internet connection.

Touch Screen Technology:
The GO Mobile touch screen offers four customizable buttons that may be configured for different user groups within the company. The GO Mobile screen displays a compass and the speed of the vehicle while accurately tracking the direction of the unit in real-time.

Text Messaging:
The software provides the ability to find a desired location on the map and dispatch the directions to a mobile device via text message. The mobile user can also receive dispatch instruction and in turn generate a route on the map or with text directions.

Versatility:
GO Mobile has a variety of different assets that can benefit Sales, Support, and Delivery employees throughout your company. GO Mobile works perfectly when employees are away from their office or vehicles and cannot hook up their GO RF or GO Live units.
